

UT 2020-03-03, Norm, Fred, Denis

V67/Creevey S2B1P5-S1B2P4

- UT1h45: arrival at GI2T, opening everything
- Sequence: C1-T1-C2-T2-C1-T1-C2-T2-C1-T1-C2-T2-C1
- T1=HD27371, T2=HD27697, C1=HD28355, C2=HD29488
- We tried to use the obsgtk gui in Atlanta but we got issues for the telescopes used in MtWilson unfortunately: there are probably issues with the servers. Jeremy&Narsi will check.
- High winds and gusts from 15mph (UT2h00) to 25/30mph (UT4h00). Still high winds at UT6h00.
- UT10h00: the wind has dropped dramatically, no particulates but a lot of twinkles. We try on W2 for the targets HD145389 and HD152107 of V38 on E1E2W2

V38/Salsi E1B1P1-E2P2B2-W2P5B3

- HD139006 as check star. By chance we were able to use the obsgtk on W2 but in full mode. It's very nice but it has generated troubles for Norm with a huge slow-down of the GUI in MtWilson. Without this we are completely in blind mode for remote operations.
- R0 reported at 1.3cm. Huge motions on the LABAO WFS.
- UT12h45 we stop.
